Journal of Information Science and Technology (JIST)
www.JIST.info

Mission: The Journal of Information Science and Technology (JIST) is a unique and innovative peer reviewed publication of the **Information Institute**. **JIST** is founded on the premise that the wealth of our society is largely dependent on its ability to organize. This ability entails working with information and therefore handling it effectively. Information therefore is the lifeblood of organizations. The **JIST** mission is to significantly expand the domain of information research to a wide and eclectic audience of academics, consultants and executives who are involved in the management of organizations either for competitive advantage or service delivery enhancement.

JIST will publish original research and comments about the science of information and the application of technology for the successful management of organizations. Contributions are particularly welcome which analyze the results of interdisciplinary research and relate to the intersection of theory, method and empirical findings. Of interest will be manuscripts, which present the theoretical concepts of the acquisition, organization, and dissemination of information to support functional and cross-functional organizational operations, planning, and decision-making. Further, publications will include the results of investigations that advance practice and understanding of the application of technology to support efficient and effective business operations. **JIST** submissions will be **double blind refereed** and will provide a forum for high quality research, communication and debate on the subject of the science of information and its technology-enabled application.

Audience: JIST will be of value to both academic and practitioner audiences. The audience will include those individuals who are interested in conducting research related to the consideration of information as a valuable corporate resource. Manuscripts reflecting all research approaches will be encouraged, including those that are multi-disciplinary. These will include information professionals who consider information to be a resource that they can leverage for organizational effectiveness. Such practitioners may reside in a broad spectrum of functions, including information technology, human resources, marketing, service delivery, supply chain management and logistics.

Information for Authors: Readers interested in submitting articles are requested to send them electronically to Dr. Rahul Singh, University of North Carolina, Greensboro, USA. rahul@uncg.edu, Editor in Chief of JIST. Detailed author guidelines are available at www.jist.info

Copyright and permissions: Copyright © 2007 by The Information Institute. All rights reserved. No part of the manuscript may be reproduced in any form without written permission of the publisher, except for noncommercial, educational use such as classroom teaching purposes.

"This Publication is designed to provide accurate and authoritative information in regard to the Subject Matter Covered. It is sold with the understanding that the publisher is not engaged in rendering legal, accounting, or other professional service. If legal advice or other expert assistance is required, the services of a competent professional person should be sought" (from the Declaration of Principles jointly adopted by a Committee of the American Bar Association and a Committee of Publishers and Associations).

Issue: Vol. 4, No. 2. ISSN: 1545-0287. An Information Institute Publication
